

## **USGS Internships**

The following information from each applicant is the first step in obtaining an internship at the United States Geological Survey, St. Petersburg Field Office:

- 1) A cover letter describing the students dates, days and hours of availability and their area(s) of interest. The information on availability is important because that will dictate to some degree what project and what tasks the student can tackle. Information on USGS research programs can be found at <http://coastal.er.usgs.gov/>.
- 2) A resume that provides information on the student's background and experience.
- 3) State interest in doing : Labwork; Fieldwork; Other technical work (specify).

This information should be transmitted to the ESP Internship Coordinator via email. The Internship Coordinator will attempt to find a placement for each student with the most appropriate program. The information contained within the cover letter provides the essential guide in that process.
